

# Letter of Attestation

March 18, 2025

To whom it may concern,

We are writing to attest that Oneleet, a penetration testing company, was contracted by Plus Five Five, Inc. DBA Resend, to perform a penetration test ASVS Level 1 and 2 on their web application from December 9, 2024 to December 23, 2024.

Resend sought to perform this assessment as part of their security due diligence. Resend wanted a review of their web application and ways in which their users may be able to bypass the security mechanisms that have been implemented to protect the data processed by the web application.

The penetration test was conducted in accordance with industry-standard methodologies such as OWASP WSTG, OWASP ASVS, and OWASP Top-10.

We assigned an experienced penetration tester (OSCP and OSCE certified) to perform the penetration test. Our tester demonstrated a deep understanding of Resend's web application, as well as the attack vectors that pose a great risk to their business.

The following table lists all objects which were targeted as part of this assessment:

Hostname	IP addresses	Description
resend.com	76.76.21.21	Application Dashboard and API Endpoint

Our security experts assessed the application security as **Excellent**.

All vulnerabilities found were reported to Resend for remediation. No critical, high or medium risk vulnerabilities were found. The willingness from Resend to test their web application attests to their commitment to maintaining a secure web application for their clients and stakeholders.

This letter of attestation was prepared specifically for Resend on behalf of Bu Kinoshita, Co-Founder and CTO. If you have any further questions, please do not hesitate to contact us.

Sincerely,

Erik Vogelzang  
Co-Founder  
Oneleet
